

DATA INTEGRATION FOR Case Manager TAILOR-MADE SOLUTIONS

SWIFT AND STREAMLINED DATA INTEGRATIONS

Our data integrations are facilitated by very user-friendly and secure data tools that make it quick and easy for end-users to insert, update and extract data in bulk.

ADVANCED DATA INTEGRATION SYSTEMS

We use advanced data integration systems to design and build highly customisable, flexible and automated data integration processes. The systems used to build these processes cater for a huge variety of different data sources, data formats and data transformations.

DATA INTEGRATION CONSULTING

The Case Manager team has done hundreds of data integrations over the past 20 years, many of them at very large clients involving millions of records. Our methodologies are personalised, efficient and agile, and have matured over the years. We also have a strong focus on skills transfer in order to empower our customers.

REAL-TIME DATA INTEGRATIONS

Using Case Manager' Extensions capabilities, it is possible to develop custom extensions which enable real-time visibility and updates to backend data systems at the click of button.
